[Abhijit Jadhav](#)

## Recognised for "Simplicity and efficiency, seeking out every opportunity to automate"

I'd like to recognize Abhijit Jadhav for their exceptional work transforming our spark unit testing process .The earlier procedure required us to mock the spark based apis which led to the unit test cases not covering all the edge scenarios. Your simplification of the approach makes sure that we do not mock the essential spark apis and allows us to write test cases faster and makes sure that the unit test suite covers the different scenarios. Also the jenkins pipeline changes will allow us to run these spark test cases during build. Abhijit's innovations have: Cut our testing time by eliminating manual steps, made writing tests more accessible for the entire team, improved our test coverage and reliability, freed up valuable development time for feature work. This initiative shows true technical leadership and commitment to quality. The pipeline changes they built will continue delivering value long-term, making our codebase more maintainable and our releases more confident.Thank you for your initiative and dedication to excellence!
