[Abhijit Jadhav](#)

Recognised for "World-class service for customers and clients, every time"

Thanks Abhijit for taking the cross account connectivity for Charge Off reversal feature proactively. Early integration is a part of left shift and extremely important to reduce defect later in the project lifecycle. This will enable to perform a round of SIT before handover is done to the E2E team for Test Execution. SIL has multiple integrations as part of this feature and Abhijit worked with high precision and proper documentation. He coordinated with PPE Devops folks in order to establish the linkage for the multiple integrations. There is some testing still pending but the connectivity we tested so far worked in one go and there was no rework required to prove the same. Thanks for the consistently excellent work Abhijit.
